

Overview

1. What is The Carpentries
2. A Very Brief History of The Carpentries
3. Where does HPC Carpentry fit?
4. Current Status
5. Roadmap and Challenges
6. The mini version
7. Comms Channels

What we will look at is what The Carpentries is about and how it came into existence. Most of you are probably quite familiar with it anyway so it will be very short. We'll then look at what HPC Carpentry is and how that came about. What the current status of the HPC Carpentries is and what our future plans are. I wouldn't be myself if I didn't squeeze a bit of the miniHPC in here, so I'll quickly mention that and then I'll leave you with ways to get into contact us so that you too can join us in bringing HPC Carpentries to researchers.

└ A Very Brief History of The Carpentries

It all started back in 1998 with Greg Wilson.

- ▶ Software Carpentry was founded in 1998 with the mission of teaching lab skills for research computing by Greg Wilson and Brent Gordon.
- ▶ HPC Carpentry making an appearance in 2013
- ▶ Since then several presentations and workshops
- ▶ Formally accepted to Lesson Program Incubation, June 2023

Dr Greg Wilson
Software Carpentry Incubation Program

└─ Current Status: Lesson Program Adoption

- ▶ Adoption as an official lesson program of The Carpentries was planned for 1 September 2026
- ▶ Changes in Carpentries Core Team support called for a short delay
- ▶ Adoption will be completed between now and November 2026

Those of you who attended my talk last year might recall that the big news back then was that HPC Carpentry would be adopted by The Carpentries, becoming their fourth official lesson program. The launch date for the new program was set for 1st September this year, which was last week. Unfortunately, that timeline had to be adjusted earlier this summer, after The Carpentries announced a reduction in Core Team capacity. We were all really keen to make it happen, though, and most of the work for the adoption had already been done, so the delay should be quite short. The deadline is now 1 November this year, and we are optimistic that we will be able to complete the process before then. Watch out for further announcements on The Carpentries blog.

└ Your Help is Needed

Ask for suggestions for domain-specific conferences where we could reach members of HPC Carpentry's target audience of learners and/or potential instructors/hosts for workshops.
