

CARPENTRY

HPC Carpentry

An Overview of HPC Carpentry's Activities

Jannetta Steyn, Newcastle University, UK

Toby Hodges, Andrew Reid, Annajiat Alim Rasel, Benson Muite, Trevor Keller, Wirawan Purwanto

September 09, 2026

1. What is The Carpentries
2. A Very Brief History of The Carpentries
3. Where does HPC Carpentry fit?
4. Current Status
5. Roadmap and Challenges
6. The mini version
7. Comms Channels

A Very Brief History of The Carpentries

- ▶ Software Carpentry was founded in 1998 with the mission of teaching lab skills for research computing by Greg Wilson and Brent Gorda.
- ▶ HPC Carpentry making an appearance in 2013
- ▶ Since then several presentations and workshops
- ▶ Formally accepted to Lesson Program Incubation, June 2023

Dr Greg Wilson
<https://carleton.ca/scs/?p=14196>

- ▶ Core curriculum: Using High-Performance Computing Systems, HPC Workflow Management with Snakemake
- ▶ Recommend to start with the SWC Unix Shell lesson where learners are not already familiar with working in the shell
- ▶ An extended curriculum of other lessons

Current Status: Lesson Support

- ▶ Instructor Onboarding documentation available
- ▶ Lesson Maintainers onboarded by The Carpentries
- ▶ Infrastructure support allows customisation of lessons to reflect local cluster configurations

Current Status: Community

- ▶ Welcomed many new members to regular community calls + Maintainer teams
- ▶ Gathered interest in teaching+hosting workshops from the wider Carpentries community
- ▶ Completed Steering Committee elections

Current Status: Lesson Program Adoption

- ▶ Adoption as an official lesson program of The Carpentries was planned for 1 September 2026
- ▶ Changes in Carpentries Core Team support called for a short delay
- ▶ Adoption will be completed between now and November 2026

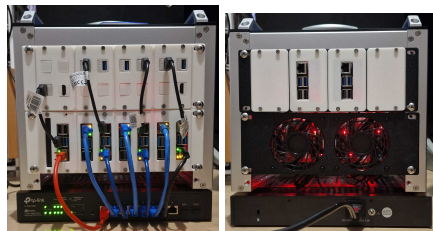

Running Workshops

- ▶ Workshops since January 2025
 - ▶ NIST – 2
 - ▶ Newcastle – 5
- ▶ Feedback to improve lesson infrastructure for adaptation to a specific HPC
- ▶ Snippets
- ▶ Episode on array jobs now included
- ▶ Onboarding for instructors

A miniHPC - CarpentriesOffline

- ▶ Pixie: Raspberry Pi 4s, one login node, five compute nodes, one access point
- ▶ The same open source software stack as many HPCs: Slurm, lmod, munge
- ▶ Running Workshops and Hackerthons
 - ▶ Lesson to build a login node and a compute node
 - ▶ Adapt HPC lesson for Pixie
 - ▶ Networking lesson

Front and Back

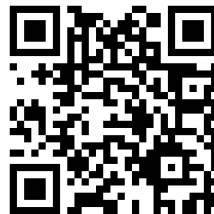

Comms Channels

- ▶ Come talk to me
- ▶ Visit our website
- ▶ Join our bi-weekly meetings
- ▶ Join our channel in The Carpentries' Slack workspace

CARPENTRY

Your Help is Needed

- ▶ Do you have any suggestions for more domain-specific conferences where we could reach members of HPC Carpentry's target audience of learners and or potential instructors hosts for workshops?
- ▶ Are you interested in teaching, organising and/or hosting HPC Carpentry workshops?
- ▶ Are you interested in getting involved with maintaining the lessons?
